By John A. Lee, Michel Verleysen : Nonlinear Dimensionality Reduction (Information Science and Statistics)
there are various parametric models for analyzing pairwise comparison data including the bradley terry luce btl and

thurstone models but their reliance on strong the use of machine learning and nonlinear statistical tools for adme prediction Nonlinear Dimensionality Reduction (Information Science and Statistics):

13 of 13 review helpful A detailed work for Manifold Learning By Customer It covers the major Manifold and in general Nonlinear dimensionality reduction such as ISOMAP Locally Linear Embedding Laplacian Eigenmaps Maximum Variance Unfolding Multidimensional scaling I think the presentation of the methods is good and very well illustrated The authors have done pretty good job in terms of figures The most important ch This book describes established and advanced methods for reducing the dimensionality of numerical databases Each description starts from intuitive ideas develops the necessary mathematical details and ends by outlining the algorithmic implementation The text provides a lucid summary of facts and concepts relating to well known methods as well as recent developments in nonlinear dimensionality reduction Methods are all described from a unifying point of view whic From the reviews This beautifully produced book covers various innovative topics in nonlinear dimensionality reduction such as Isomap locally linear embedding and Laplacian eigenmaps etc Those topics are usually not covered by existing texts on multiv
